

Inorganic and Organometallic Polymers: A Comprehensive Guide to Advanced Materials

By De Gruyter Stem

Inorganic and organometallic polymers are a rapidly growing class of materials with a wide range of applications in electronics, optics, catalysis, and biomedicine. This book provides a comprehensive overview of the synthesis, characterization, and applications of these materials. The authors are leading experts in the field, and they have written a book that is both authoritative and accessible.

The book begins with a discussion of the fundamental principles of inorganic and organometallic polymer chemistry. The authors then describe the various methods for synthesizing these materials. The book also includes a detailed discussion of the characterization techniques that are used to study these materials. The final section of the book describes the applications of inorganic and organometallic polymers in a variety of fields.

This book is an essential resource for anyone who is working in the field of inorganic and organometallic polymers. It is also a valuable reference for anyone who is interested in learning more about these materials.

Features

- Covers the latest advances in inorganic and organometallic polymer chemistry
- Written by leading experts in the field
- Provides a comprehensive overview of the synthesis, characterization, and applications of these materials
- Includes a detailed discussion of the fundamental principles of inorganic and organometallic polymer chemistry
- Describes the various methods for synthesizing these materials
- Includes a detailed discussion of the characterization techniques that are used to study these materials
- Describes the applications of inorganic and organometallic polymers in a variety of fields

Benefits

- Provides a comprehensive overview of the field of inorganic and organometallic polymers
- Written by leading experts in the field
- Provides a valuable reference for anyone who is working in the field of inorganic and organometallic polymers

- Is also a valuable resource for anyone who is interested in learning more about these materials
