NFTs, on the other hand, are non-fungible, meaning that they cannot be replaced by another identical token.

NFTs are created by minting them on a blockchain. Minting is the process of creating a new NFT and adding it to the blockchain. Once an NFT has been minted, it cannot be changed or deleted.

## **Chapter 2: How Do NFTs Work?**

NFTs work by using a distributed ledger called a blockchain. A blockchain is a secure, transparent, and immutable ledger that records transactions between two parties. Each transaction is added to a block, which is then added to the blockchain. Once a block has been added to the blockchain, it cannot be changed or deleted.
